

If your Fire Pump is not working... YOUR FIRE SPRINKLER SYSTEM IS NOT WORKING.

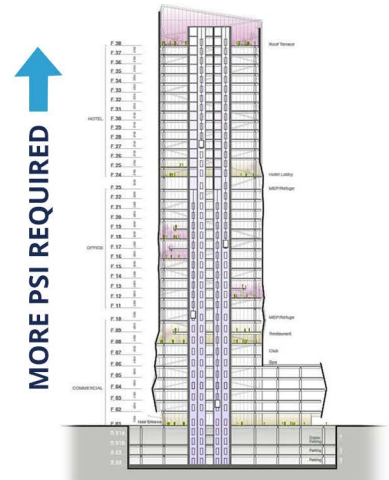

Did you know the Fire Protection system is supplied by the same public water mains as the fire hydrants and your domestic drinking water?

Did you know that a fire pump increase GPM and PSI to provide the required Fire Sprinkler system demand as designed by the Engineer Of Record.

Did you know that most buildings over four stories in height have a fire pump and lose approx 1/2 pound of pressure for every foot in elevation. So the taller the building, the more pressure is required.

Avoid The Fire Watch

- Diesel Fire Pump UL/FM Listed
- Fast 24/7 Response
- Affordable Solutions
- Field Proven Record of Service
- Enclosed Trailer
- Outstanding Performance

Introducing RentFirePumps.com, an emergency diesel fire pump trailer available for immediate assistance when your fire pump is down and you can't afford to be without fire protection services.
